Welcome to the new Winter 2013 brochure - You may have noticed it's changed in format from previous publications! We've been working hard to produce something which offers more than just great deals. One of the cornerstones of our philosophy is customer support. We want to do our best to help - whether you're a seasoned expert or novice woodworker.

To this end, we're very pleased to offer what we believe is the best Record Power promotional brochure yet. As usual, it is packed with some fantastic special offers from across our range but also now features some very useful articles. Alan Holtham's pen turning tutorial, the video of which can be found on our website, is presented here as an easy to follow step-by-step project, ideal for keeping in the workshop as reference. Also, following the success of our article in Summer's brochure with an in-depth guide to choosing a bandsaw blade, we feature a follow up article providing an expert guide to fitting and setting up a bandsaw blade - containing some invaluable tips. The back pages of the brochure now also feature a full product listing of machines, accessories and consumables.

This is a great go-to reference guide of our full range and promotional pricing, so remember to hang on to it!

Some of you may be aware of some big changes at Record Power over the last few months - I'm delighted to announce we completed our relocation successfully and have been up and running in our new home since July 29th. This move marks an extremely positive time for the company as we work to develop the business, ensuring continued success and growth. Our export business is going from strength to strength as we supply over 30 countries worldwide. In addition, our quality control and product development departments now have the room to grow and build on their respective successes, ensuring continued improvements in quality and some exciting new product development in the pipeline.

Of course, a building by itself doesn't make a company successful. The keys to continued and successful growth are our loyal customers whose continued support we are very grateful for, our network of knowledgeable dealers and our fantastic team, many of whom have been with the company over 25 years and some over 40 years.

We thank you for your continued support and interest in Record Power. I'm extremely proud of the products and services we offer and it's always a pleasure to hear your feedback and see so many of you at the shows and exhibitions we attend throughout the year. We hope you enjoy this Winter promotional brochure and find it useful. If you haven't already, you can register online and subscribe to our newsletters and be the first to hear of our new products, shows and much more.

Woodturning

Woodturning can be an endlessly satisfying and creative pastime; an accessible craft for beginners yet with huge scope for development and artistic expression. Some turners develop to the stage where they even turn professional, such is the scope of this craft. Record Power are proud to offer probably the fullest range of woodturning lathes and accessories available, catering for the complete beginner right up to the most demanding of professionals. Record's experience and knowledge in this area is unparalleled. Woodturning is at the heart of the company's history, after many years ago incorporating the respected Coronet Lathe Company, Derby, Record Power lathes and accessories stand for high quality design and innovation since 1946. This means you can be confident in buying quality tools that will last a lifetime and fulfil whatever needs you have as your skills and ambitions develop.

DML305 Cast Iron 6 Speed Midi Lathe

The DML305 cast iron lathe represents a new benchmark in high quality midi lathes and is perfect for the user with minimal space or as a second lathe for demonstrations and shows.

The high quality finish and extra features, such as spindle indexing and locking as well as a handy tool tray, are features normally only found on expensive professional lathes.

DML305-VS
Variable Speed
version also available.
See website for full details.

Key Features
- Solid cast iron bed
- Cam lock toolrest.
- Bench mountable.
- Legstand available.
- Extendable bed.

Handy integral tool caddy.

The spindle lock features graduated markings on the tailstock barrel.

Headstock Easily accessible pulley system makes changing speed an easy task and the Headstock also features indexing.

What They Say...

"This is an ideal machine for the smaller workshop or as a second lathe...the DML305 represent excellent value for money."

CL3-CAM & **CL4-CAM** Professional Lathes

The Record Power CL series lathes enjoy an enviable pedigree and reputation, stretching back to the 1950s and represent the best of British design and innovation.

We are extremely proud to introduce the new updated models, now featuring superior solid steel castings for even greater strength and rigidity. A further refinement is the improved and more efficient variable speed unit, available as an upgrade option on the CL3 and featured as standard on the CL4, made in Britain to exacting standards, this compact unit provides simple, responsive and smooth speed change at the turn of a dial.

CL3-CAM

Taper:	1MT	1MT
Size:	H386 x W1625 x D381mm	H600 x W1625 x D381mm
Weight:	86kg	90kg

The phosphor bronze bearings of the CL series offer long life, unrivalled support and are adjustable to ensure years of reliable performance.

12" bowl capacity over bed, 30" with headstock swivelled.

The heavy duty tailstocks give excellent stability thanks to accurate cast construction.
A brass pad protects the tailstock barrel to ensure smooth operation.

Most turning can be achieved safely and effectively between 400 and 2000rpm*. The higher speeds are only to be used by experienced turners who have had adequate training and observe all recommended safety and operating procedures.

DVR-XP Heavy Duty Variable Speed Lathe

The DVR-XP is the world's first intelligent lathe, combining the best features of high-end conventional lathes such as power, capacity and capability, with state of the art technology to make your turning safer, more efficient and enjoyable.

The Nova DVR XP has the power and versatility to cope with all your turning requirements, from small pens to large diameter bowls. With its unique 2hp Electro Magnetic Boost™ high torque motor, exceptional structural strength and smart design, it is not only easy to convert to larger bowls and outrigger work and extend spindle capacity with add on beds, but the DVR has the power, structural integrity and capacity to handle these operations with ease.

Massive 29" bowl turning capacity when using the OR3000 Outrigger. Handles large work pieces with ease.

RRP £2379.98

Shown with optional **OR3000** Cast Iron outrigger.

Key Features

- Computer controlled variable speed.
- Solid cast iron construction throughout.
- One piece headstock.
- Solid cast iron trapezoidal bed.
- Extendable beds.

All Nova lathes are built to exacting tolerances.

The substantial 1 1/4" x 8TPI spindle provides more than adequate support for large, heavy workpieces.

Key Specifications

Max between centres: 600mm, extendable in 510mm units
Swing over bed: 400mm
Max bowl diameter: 740mm
Spindle speeds: 100-3500rpm
Motor: 2hp
Spindle thread: 1 1/4" x 8 tpi
Tapers: No 2mt
Weight: 82kg (lathe only)

What They Say...

"All in all, the Nova DVR is a high-quality lathe which is a pleasure to use… Its real advantage compared with many other lathes on the market is the motor system, which gives so much torque at low revs, and a variable speed system that is so easy to use. The absence of belts and pulleys gives a smooth firm drive making for a better finish off the tool. It's a quality lathe that I would be very happy to have as a main lathe in my workshop. If you were thinking of buying a Nova DVR, then I would advise buying the outrigger to benefit from the full versatility of the lathe."

DVR Technology Explained

The DVR motor is a truly innovative design, with no belts or pulleys to wear out, this system provides perfectly smooth and energy efficient operation.

The motor is computer controlled using an easy to operate console, meaning changes in speed are achieved almost instantaneously, with no need to change belts.

Cross Section of Headstock

How it Works

One by one the magnetic coils in the stator generate an intense magnetic field which turns the rotor (of which the spindle is integral) to the specified speed. Sensors feed information back to the computer, which automatically adjusts operation of the stator to provide optimum torque and constant, accurate speeds. This ensures perfect performance and even senses chisel dig-in, in order to stop the motor safely.

MAXI-1 Heavy Duty Variable Speed Swivel Head Lathe

The MAXI-1 has been specially designed to offer large capacities and support for heavy work in a compact design. Combining Record's traditional swivel head functionality with modern construction and high quality electronic control, this machine is ideal for the professional woodturner as well as the dedicated enthusiast.
Cast iron features heavily in the construction of this machine, including the legs, headstock, tailstock and cast bed. The power, solidity and value of this machine is unrivalled in its class.

Key Features
- Heavy duty cast iron bed and stand.
- Electronic variable speed.
- Sturdy 1" diameter toolrest spindle.
- Repositionable control box.

Swivel Head Packed with features, the heavy duty swivel head features a 6 speed pulley change, cam lock swivel, safety micro switch and indexing.

Toolrest Heavy toolrest and banjo with very positive cam lock for easy one handed movement.

MAXI-1/A Bowl Turning Attachment RRP £~~169.99~~ **£149.99**

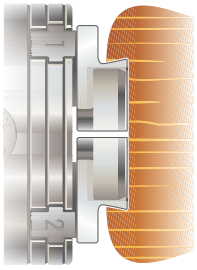

What They Say...

"This machine punches well above its weight and performs very well. Having already tested various large capacity lathes within the £2,000-£3,500 bracket, I believe that the MAXI-1 is exemplary in terms of the versatility, capacity, solidity, control and the power it offers. Go and try one out I guarantee that you will not be disappointed. I enjoy using it every time I press the button and its quiet running is an added bonus."
Woodturning,
Mark Sanger (Professional Woodturner)

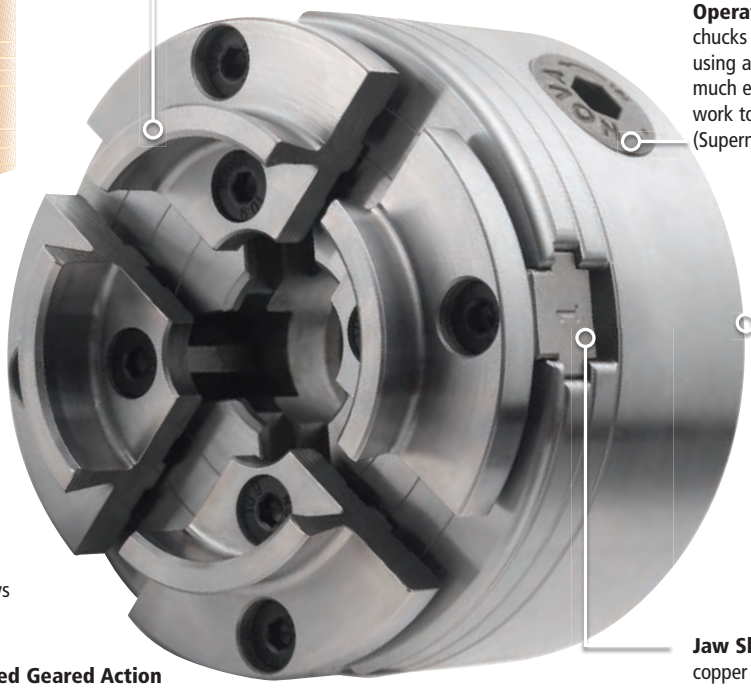

Chucking Systems

The Nova series chucks and jaws have been developed over many years to provide ultimate holding power, flexibility of use, reliability and value. Record Power have unrivalled experience and knowledge in the manufacture of premium quality woodturning products and are proud to offer what we believe is the highest quality chucking system available. As with all Record Power tools, the 5 year guarantee has been applied with absolute confidence.

Dovetail Profile Designed Specifically for Wood Unlike many other manufacturer's dovetail jaws, which use a basic engineering profile more suited to holding steel, the Nova series are designed to hold wood with maximum effectiveness whilst minimising damage.

Universal Jaw Fixing System Both chucks feature the same jaw fixings that will accept the full range of Nova series jaws, providing great flexibility. This system is also compatible with the jaws of some other manufacturers.

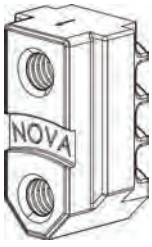

One Handed Operation Both chucks are operated using a key, making it much easier to mount work to the chuck. (Supernova² shown).

Fully Sealed Backing Plate The Duracon composite is reinforced with glass fibres for long life in tough conditions and has self lubricating properties. The backing plate fully seals the chuck interior to protect it from dust and debris and features 22 indexing points. Backing plate featured on the Supernova² only.

High Tensile Strength The chuck bodies are made from precision machined K1045 high tensile steel, for superior strength and performance. Polished soft metal finish allows for finer tolerances.

Precision Engineered Geared Action With Tufflock™ technology providing precise, hardened geared action and delivering exceptionally smooth strength. Solid and vibration free.

Jaw Slides with Safety Auto Stops The copper impregnated cast iron slides have extra long life and are self lubricating for easy movement and resistance to wear. The auto stop safety feature ensures that the jaws cannot protrude from the chuck body.

Chuck Jaws

The Record Power range of chuck jaws offer the woodturner unrivalled versatility, with probably the widest range available, allowing for virtually any kind of work to be undertaken.

The full range of jaws is available online.

JSCOLE Cole Jaw Set & **6006** Mini Cole Jaws

A versatile set designed for re-mounting of bowls. Cole Jaws are suitable for lathes with minimum 12"/ 300mm swing diameter.

JSCOLE Cole Jaw Set **£74.99**
6006 Mini Cole Jaws **£54.99**

6021 Soft Jaws

These jaws can be easily cut using standard tools to create custom jaws to perfectly suit the turner's needs. The characteristics of the nylon mean excellent grip is achieved without marking the wood.

6021 Soft Jaws **£16.99**

JS70N 70 mm (2.75") Jaws

These extremely versatile jaws are a bigger version of the standard 50 mm jaws and are particularly suitable for larger work, including hollow forms.

Expansion: 70 - 90 mm
Contraction Square: 65 - 37 mm
Contraction Spigot: 77 - 56 mm

JS70N 70 mm Jaws **£39.99**

JS75DT Step Jaws

Great for gripping the base of bowls in the contracting mode. Three step sizes provide optimum gripping for three base sizes with minimal crush damage to the wood. Optimum step sizes: 42 mm (1.65"), 50 mm (2") and 64 mm (2.5").

Expansion: 77.5-97.5 mm
Contraction Square: 51-30, 57-36 & 66-45 mm
Contraction Spigot: 62.5 - 41.5, 71.5 - 50.5 & 83.5-63.5 mm

JS75DT Step Jaws **£49.99**

JS-SP45 45 mm (1.8") Spigot Jaws

Same style as the 35 mm spigot, these jaws provide a strong contracting grip to unsupported spigot turning applications e.g. vases, goblets. Can handle spigots from 38 mm (1.5") to 60 mm (2.38").

Expansion: 52-72 mm
Contraction Square: 51 - 31 mm
Contraction Spigot: 61 - 41 mm

6000 50mm Faceplate Ring **£49.99**

6025 Mini Step Jaws

These multipurpose dual grip jaws are designed to grip small to medium sized recesses in expansion, as well as smaller spigots in contraction, such as pen blanks.

Expansion: 26-47 and 36-57 mm
Contraction Square: 28-8 mm
Contraction Spigot: 31-10 mm

6025 Mini Step Jaws **£39.99**

PJSN Powergrip Jaws

The most powerful jaw available for large spigot/ hollow form turning on the Supernova2, it is also a multi purpose jaw for bowl turners and hollow form turners. Dovetail sizes fit neatly between the 75mm (3") and the 130mm (5") jaw sets.

Expansion: 95-116 mm
Contraction Square: 76 - 55 mm
Contraction Spigot: 98 - 77 mm

JS-SP45 Spigot Jaw **£59.99**

JS70N 70 mm (2.75") Jaws

These extremely versatile jaws are a bigger version of the standard 50 mm jaws and are particularly suitable for larger work, including hollow forms.

Expansion: 70-90 mm
Contraction Square: 65-37 mm
Contraction Spigot: 77-56 mm

JS70N 70 mm Jaws **£39.99**

Nova Chuck Spur Centre

A quick mount spur drive that fits in your Nova chuck so it does not need removing when spindle turning.

NCSC Nova Chuck Spur Centre **£18.99**

Step-by-Step Pen Turning

with Alan Holtham.

Pen making has become extremely popular in recent years, almost becoming a separate branch of woodturning. In fact there are turners who make nothing else, such is the market for nicely made wooden pens. I think the appeal is in the sheer individuality that a wooden pen has.

However you are not restricted to just using wood, as pens can be turned in a variety of other materials. Offcuts of Corian worktops turn up nicely and there is a whole range of other plastic and acrylic materials such as crushed velvet specially made for pen making. Other turners laminate blanks up from coloured veneers or use bone and horn. The essentials are a decent quality drill bit, a pen mandrel with suitable bushes for the style of pen you are making and a barrel trimmer, which is either available as a single size, or with interchangeable pilots for the different barrel diameters.
When it comes to the assembly a pen press makes the job very much easier, particularly if you are in to mass production. You can buy dedicated pen making chisels, these really help make turning more easy and enjoyable as they suit the small scale of the work and are preferable to standard turning tools. Finally, a barrel insertion tube makes the otherwise messy job of pushing in the glue covered barrels a lot cleaner and much easier.

The mechanisms are available in a wide variety of styles and you can make pencils and fountain pens to match. I would suggest you start with a simple parallel design to start with to get the hang of the procedure.

There is nothing particularly difficult about pen making, but you have to work very carefully to get the sizes dead on and there is very little room for error. The good thing is that if something does go wrong there is very little lost in the way of material. Pen blanks are obtainable ready cut to size, but I tend to cut my own from offcuts and scraps salvaged from bigger blanks.

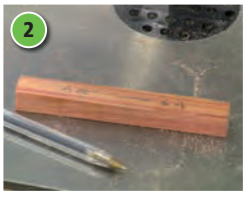

Any wood will turn into a pen, but the fine grained and more decorative ones are better as they will stand turning to the very thin sections required. However, the highly decorative burrs and curls are much more difficult to work so save these until you have gained some experience.

With pen making more than any other type of turning, it is important that you work methodically as you are using a number of very small components that are easily lost and need to be assembled in the correct order. It is actually all very straightforward but you must work carefully.

The most critical stage is the initial drilling and it is worth investing in a top quality drill bit to ensure the hole is dead to size and doesn't wander off along the length of the blank.

If you are cutting the blanks yourself make them slightly oversize to allow for the drill bit going off line slightly. I cut mine about 15mm square if there is enough material.

Cut the blank full length first, then draw a short line through the centre and mark them with some form of identification.

Now it is safe to cut the blanks through the middle, leaving them about 3mm longer than the length of the brass barrels.

For these straight pens you will need a sharp 7mm bit, I prefer the brad type with a central spur set up in the drill press.

Mark the centre of each blank by drawing in the diagonals then hold it securely in a drill vice.

The brass barrel should finish up just below the surface of the timber at both ends if you have cut the blanks to the right length to start with.

To trim them to exact length the ideal tool is a barrel trimmer, which will also clean out any stray glue that might have got into the inside of the barrel.

Fit the blanks onto the mandrel with the grain lined up correctly and a spacer gauge in the middle and at either end. Tighten up the locking nut to stop them spinning.

Select the top speed on your lathe, somewhere around 3000 rpm is ideal if you can get that high. Bring the blanks down to somewhere near the diameter of the spacers using the gouge.

Then use a skew chisel to reduce it down further trying to get as near as possible to the spacer diameter.

Slide the finished barrels off the mandrel, keeping them orientated correctly to each other.

To keep all the components together and in the right order make an assembly board with a groove routed along its length to stop them all rolling about.

Start the assembly by pressing the pen tip into the bottom end of the first barrel.

Press the mechanism into the top end of the first barrel, making sure it goes in straight.

Press it in until the crimped groove on the mechanism lines up with the end of the barrel.

See the full range, buy online or find a stockist at www.recordpower.co.uk
Prices valid until 31.08.2013. E&OE.

> There is something very satisfying about using a hand turned pen made from some exotic timber and they're so easy to make.

Drill slowly and carefully allowing the swarf to clear. If you force the drill and get the blank too hot it will crack when you turn it down to the final thin diameter.

No matter how carefully you set up the vice, the hole will always go a little off centre at the exit end, hence the need for cutting the blanks slightly oversized.

Use the lathe with the drill chuck fitted in the headstock. Leave the blanks slightly over length and trim them afterwards as you cannot drill right through without damaging the revolving centre.

After keying the barrels with some fine abrasive paper, stick them in place with superglue.

Use the insertion tube to slide the barrel into the bore, making sure it goes well in. Be quick about this as the glue will soon grab hold of it if you hesitate too long.

Check that the diameters are parallel using a small square.

You can even things up using some 240 grit abrasive wrapped around a block, but beware of getting the timber too hot or it will crack.

Finish off by working down the grades of abrasive; I finish at around 800 grit for a really fine surface working along the length of the grain with the lathe stationary.

Standard cellulose sealer and friction polish leave a very satisfactory surface. Rub in a couple of coats of sealer with the lathe stationary and flat it down with fine abrasive.

Apply the friction polish as the lathe is spinning, building up several coats as each one dries, then finish off with a coat of carnauba wax.

Try screwing in the ink cartridge to see if the nib protrudes enough from the tip. If it doesn't press the mechanism in a fraction more.

Now press the top through the clip into the top end of the second tube.

Screw in the ink cartridge; slip on the central ring and push the top on to complete the pen.

Bandsaws

For many serious woodworkers the bandsaw is probably the most useful and versatile addition they will make to their workshop. The combination of deep cutting, the ability to cut both curved and straight lines, tilting tables and a wide choice of blade widths and tooth combinations opens up a huge range of applications to the bandsaw user, whilst taking up minimal floor space. You can rip, re-saw, cut wafer thin veneers, tenon cheeks, bevels, curves and even circles.

BS12 Standard 12" Bandsaw

The BS12 is built to offer exceptional performance and value for money if usage or budget cannot justify one of our premium machines. Our brief was to create a machine that could compete in the entry level market whilst offering better features and performance than the competition and apply our 5 year guarantee with absolute confidence.

This machine offers all the features you may expect on a machine at this price, such as aluminium extrusions for fence, rail and mount, extruded alloy guide post, aluminium band wheels and an effective tensioning system. In addition, it also boasts a number of features that lift it well above the direct competition and which are a real bonus on a machine at such a modest cost.

Key Features

- Cast iron table. • Roller guides. • Steel mitre fence included.
- Leg stand & wheel kit included.

Rack and pinion table tilt, offering one handed operation and much more accurate than the simple sliding cast alloy trunnions usually found at this level.

Good quality steel mitre fence included.

Easy adjust roller guides, an effective design similar to guides found on our premium range of bandsaws.

RRP £1049.99

What They Say...

"All this serious weight makes for a bandsaw that's a very smooth machine to use, and the flywheel effect of those massive cast iron band wheels coupled to a powerful 1500 W motor means that the machine will happily cut through material near the maximum depth of 305 mm....This is a very well specified and finished machine producing a performance that belies its relatively modest price tag."

Microswitches
Are fitted top and bottom for added safety, cutting power to the machine when the doors are open.

Cam Action Tensioner
With the flick of a handle the tension is released on the blade enabling quick easy changing, but more importantly, when reset, the previous tension is automatically applied to the new blade. This makes blade changing a much simpler task and allowing tension to be taken off the blade when not in use.

Features large blade guides that are accurate and easy to use.

Table tilts both ways on a rack and pinion mechanism for accuracy.

Cast iron bandwheels and heavy duty tensioning system.

WINTER SPECIAL

Bandsaw Blade Setup

Maximise your bandsaw's performance with a correctly fitted blade - This expert guide shows how to successfully install a bandsaw blade, from start to finish, taking into account the many factors at play such as guide positioning, tyre condition and more.

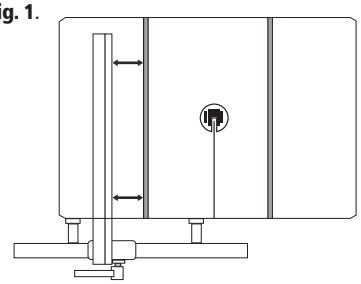

Before making any adjustment to your machine always ensure it is isolated from the electrical supply.

Preparation of the Bandsaw

Before installing a new blade, the bandsaw must be checked to ensure it is correctly set up. If the machine is not accurately set then the blade will not perform as expected, cut accurately or could even get damaged. For full details on how to carry out the below checks please refer to your machine manual.

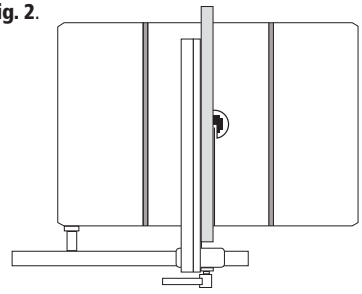

1. Ensure that the rip fence of the bandsaw is aligned with the table slots which are used for the mitre fence. This also ensures the mitre fence will run true, **Fig. 1**.

Fig. 1.

2. Then check that the table is set square to the blade. Place a straight edge flush against the side of the blade then slide the rip fence up to it. If they are not parallel then adjust the table until the rip fence runs parallel to the straight edge, **Figure 2**.

Fig. 2.

Preparation of the Blade

1. Always clean a new blade before use - A rub with a cloth is sufficient to remove any grease or deposits created by the manufacturing process.

2. Check the joint of the blade - at the point where the blade was welded together into a loop, there may be a small imperfection on the back of the blade. If necessary this can be removed easily using either a file or dry oilstone.

Choice of Blade

Please see the website for a detailed article on blade choice. In brief, the narrower the blade then the tighter the radius that can be cut and a minimum of three teeth should be in contact with the material to be cut at any one time. There are many factors which affect blade choice. If in any doubt, please check our website or contact us. The quality of the blade should also be considered - All Record Power blades are heat treated along the tooth section, for hardened cutting with a flexible back. This gives a blue hue to the front of the blade, leaving the back black. Always check to make sure it has been treated in this way to ensure you are using a quality blade, **Fig 3.**

Fig. 3.

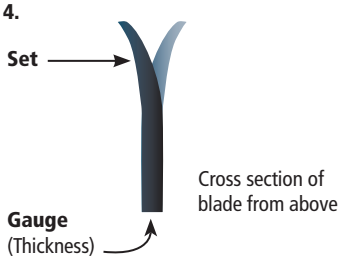

Fitting the Blade

Once the bandsaw is correctly set up and a suitable blade has been chosen, the condition of the wheels should be checked. Remove any foreign bodies from the tyre and clean off any build-up of resin that may have occurred during use - a blade will not run true on wheels that are in poor condition. In most cases in the Record Power range these will be rubber tyres which can be cleaned or rubbed down with an abrasive pad. If the tyre has any damage then it must be replaced. The blade will not run evenly or true across tyres with an uneven surface or damage.

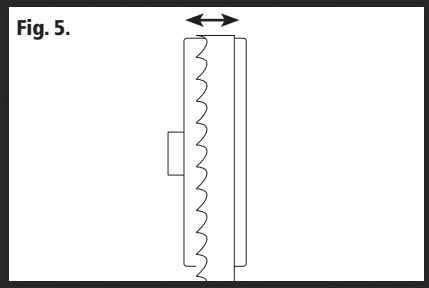

Before fitting the new blade, remove the table insert and move back the guides above and below the table so they will not touch the new blade as this could cause damage to the set of the teeth during setup. The set of the teeth describes their orientation along the length of the blade - all teeth are skewed alternately left and right; this creates a ripping action when cutting, **Fig. 4.**

Fig. 4.

Removing the old blade requires lowering of the top band wheel. Carefully place the new blade over the upper and lower band wheels. Ensure your machine is isolated from the electrical supply so you can increase tension to the top wheel while turning the top wheel by hand - The blade will then find its natural position. To adjust the blade either forward or back you need to turn the tracking knob to make sure the blade is fully on the wheel, then you can close the doors and run the machine which will allow the blade to find its true running position, **Fig. 5.**

Fig. 5.

Tensioning

Tensioning is probably the most common question about bandsaw setup. if the tension is too low then when you try to cut, the blade will try to move on the tyres and disturb all the settings. The best way we have found for setting a blade is to open the top door of the bandsaw (after isolating the machine) then apply reasonable pressure about two or three inches down from the left side of the top wheel, using a push stick. We want to see no more than 6 mm (¼") movement and this should be adequate for most applications. This rule-of-thumb apples to all types of blade, **Fig. 6.**

Fig. 6.

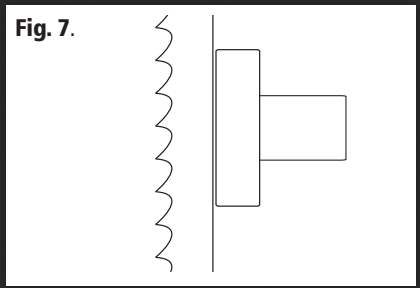

Setting the Guides

Please note that the purpose of the blade guides are to support the blade if necessary. The guides should not touch the blades when there is no cut being carried out.

There are three guide setting components above and three below the table. The thrust bearings are found behind the blade and these need to be set close to it, without touching. **Fig 7.**

Fig. 7.

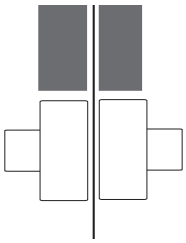

See the full range, buy online or find a stockist at www.recordpower.co.uk

Prices valid until 28.02.2014. E&OE.

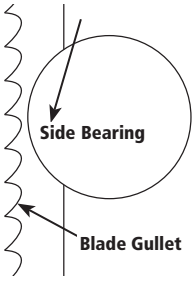

This allows the blade to run freely and supports it when pressure is applied during cutting, **Fig. 8.**

Fig. 8.

The positioning of the side bearings is important - Remember that the purpose of the guides is to support the blade when needed and prevent it twisting - they shouldn't touch the blade when no load is being applied, **Fig. 9.**

Fig. 9.

They also need to be placed behind the gullet of the teeth so that when they do come into contact with the blade the tooth profile and set are not damaged.

Always remember to adjust the guides every time you change the blade. In some cases if the same blade is removed then put back on, it can acquire a slightly different position, so always check the guides are positioned correctly in line with the blade's new position, even when fitting the same width blade.

Sample Cut

Once the blade setup is complete, it is advisable to try a straight cut along the rip fence. This will give an excellent indication of whether the blade is setup correctly.
If it does not cut straight with a good quality blade and you have checked the basic accuracy settings of the table and fence, then try applying a little more tension to see if this improves the cut. Also check that the drive belt of your machine is adequately tensioned.

Woodcarving Educational Package

This incredible value package comes with a brand new set of 12 chisel profiles, the RPCV12/A. It also includes an excellent tuitional DVD and booklet from internationally acclaimed carver and teacher Mike Davies.

Mike is an accomplished and highly experienced woodcarver, having served his apprenticeship in the UK and completed work for royalty, national trusts and private collectors alike.

Mike has developed his unique and highly successful 'carving by numbers' system as a way to impart his years of expertise and teaching experience in a logical and easy to understand fashion, ideal for the novice carving enthusiast. This DVD features his Significant Six carving techniques that will form a solid foundation upon which the aspiring woodcarver's skills can be built. By following Mike's proven system the viewer will soon be creating a collection of attractive projects and designs using a basic set of 12 tools.

AVAILABLE MID OCTOBER

Included in this educational package:

- Tool Talk.
- Sharpening & Maintenance.
- The Significant Six Techniques.
- Timber Selection.
- Basic Flower Project.
- Practice Makes Perfect Project.
- Tips and Tools.
- 16 Page full colour companion
- booklet containing a collection
- of projects to put your skill to the test.

AC400 Air Cleaner

This new air filter offers great features and performance at a very competitive price. It features two stage filtration with pocket filters (previously only available on our top of the range AC2 machine and nearly twice the price) to provide filtration down to 1 micron. It has 3 speeds and a timer function so you can leave the unit to run for a period after you have finished in the workshop. Both of which can be applied by remote control, which is included with the machine. Also supplied with mounting hooks and chains.

The filters are easily removable for cleaning or replacing.

5 YEAR GUARANTEE

Remotely controlled programmable timer with three speeds.

Highly effective 2 stage fine filtration down to 1 micron.

Key Specifications
Maximum Air Flow: 409 CFM
Outer Filter: 5 Microns
Inner Filter: 1 Micron
Motor: 1/8 hp

WG250-PK/A 10" Wet Stone Sharpening System Package

A wet stone grinding system with a range of gauges and jigs is essential for many woodworkers. This machine was the result of research carried out with a number of renowned turners and woodworkers who looked at the other machines on the market and advised what they thought was needed to improve on what was currently available. There are a number of things that make this machine stand out from the competition – some small but significant details and some major points of difference to most of the competition.

If you are in the market for a great quality wet stone grinder be sure to check this out at your nearest show, demo or dealer.

Key Specification

No Load Speed: 90 - 150 min^{-1}
Grinding Wheel Size: 250 x 50 mm
Honing Wheel Diameter: 230 x 30 mm
Grinding Wheel Bore: 12 mm
Motor: 160W

5 YEAR GUARANTEE

Left Hand Nut Thread To ensure the grinding wheel is held securely with no danger of unwinding.

Drip Guard The polycarbonate water bath also features a drip guard to help protect the top of the machine and redirect drips back into the main tray.

Adjustable speeds from 90 – 150 rpm As the stone wears the diameter reduces. On most machines you cannot do anything about this, but with Record Power you can adjust the speed to compensate. In addition when you want to remove material more quickly you can increase the speed of the stone.

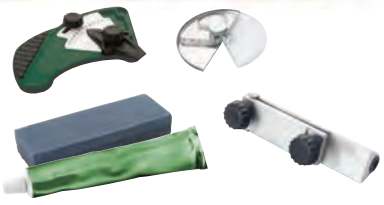

Leather Honing Wheel Included as standard.

These are designed to remove airborne dust from the workshop. An impeller inside the machine creates airflow which passes through various levels of filtration depending on your machine to exhaust cleaner air through the rear of the machine back into the workshop. Ideally it is best to leave air filters running all the time you are in the workshop and ideally for an hour or two after you have finished to clean the air. Air filters generally have low maintenance costs as the filters can be cleaned, so unless they become damaged it is highly unlikely they will need replacing.

Benefits

- Supplementary to direct machine extraction, they are the by far the best solution to harmful airborne dust
- Take up minimal space as they must be positioned high up, often in roof space

What They Say...

"Record Power seem to have come up with a winning product in the form of the AC400 compact air cleaner. It can be hung from the ceiling or even stood on a shelf thanks to the top hook fixing points, the rubber feet underneath and a handle to move it around. The AC400 also has a remotely controlled programmable timer with three speeds, which is a real bonus.

Dust control is a multi-layered business and this unit will form a vital part of that. Used regularly and with appropriate filter changes it will help save your health and increase working comfort."

Terms & Conditions

1.1 Images and specifications quoted in this leaflet are not binding in detail. We reserve the right to change specification without notice. E&OE.

1.2 Record Power supply their products through a national network of dealers and authorised distributors and your contract of sale will be with the dealer from whom you purchase our goods.

1.3 If you are not satisfied with any of our products you should in the first instance approach the retailer from whom you purchased it.

1.4 Customers have statutory rights to protect them and information on these can be found at the Citizens Advice Bureau, www.citizensadvice.org.uk or BERR Department for Business Enterprise & Regulatory Reform, www.dti.gov.uk.

1.5 Record Power guarantees that for a period of 5 years from the date of purchase the components of our products will be free from defects caused by faulty construction or manufacture. To benefit product must be registered with Record Power via our website, phone or post and does not cover industrial or commercial use. In all other events a 1 year guarantee will apply. Full details of the guarantee can be requested from Record Power Ltd, Centenary House, 11 Midland Way, Barlborough Links, Chesterfield, Derbyshire S43 4XA, Tel: 01246 571020 or on our website, www.recordpower.co.uk from the terms and conditions section at the bottom of each web page.

1.6 Prices quoted in this leaflet are based on customer collection from participating dealers. If delivery is required, a carriage charge may be applicable - please check details with your participating dealer of choice.

1.7 Buy Same Time deals are limited to one of each option offered per main item purchased and must be bought at the same time.

BST= Price applies when bought at the same as main product.
